» About SLCG

WHO WE ARE

The Spanish Lung Cancer Group (SLCG), founded in 1991, is one of the first independent clinical research group in the oncology setting that was created in Spain to advance the cure for the disease of lung cancer. With over 30 years of experience, the SLCG has achieved a remarkable position among the scientific and medical community and is one of the most active working groups at national and international level. Some of the SLCG's studies have been determinant in changes in the patient care practice and in the use of new treatments.

MISION AND VISION

COMMITMENT TO RESEARCH

The SLCG is committed to and support translational and cooperative research as a key factor in the fight against lung cancer, encouraging new lines of work in independent studies and supporting young talent with grants for new projects. This enables us to provide early access to new therapies and drugs to make progress in improving patient survival.

MULTIDISCIPLINARY APPROACH

The Group comprises more than 650 specialists (oncologists, thoracic surgeons, radiotherapists, pneumologists, epidemiologists, anatomical pathologists...) and brings together 192 hospitals throughout Spain. This networking enables the coordination among different institutions and experts to enhance collaboration in studies and increase quality standards.

SOCIAL IMPLICATION

The SLCG is socially involved in the analysis and radiography of lung cancer in Spain. In addition, we fight for the primary prevention of the disease, supporting social awareness against smoking.

OUR VALUES

To promote multidisciplinary work and coordination between different institutions and specialists.

To create personalized plans for each patient, allowing the most effective therapies to be identified to improve patients' quality of life and increase their survival rates.

To enable the development of protocols and new lines of research.

To facilitate early access to new therapies and drugs.

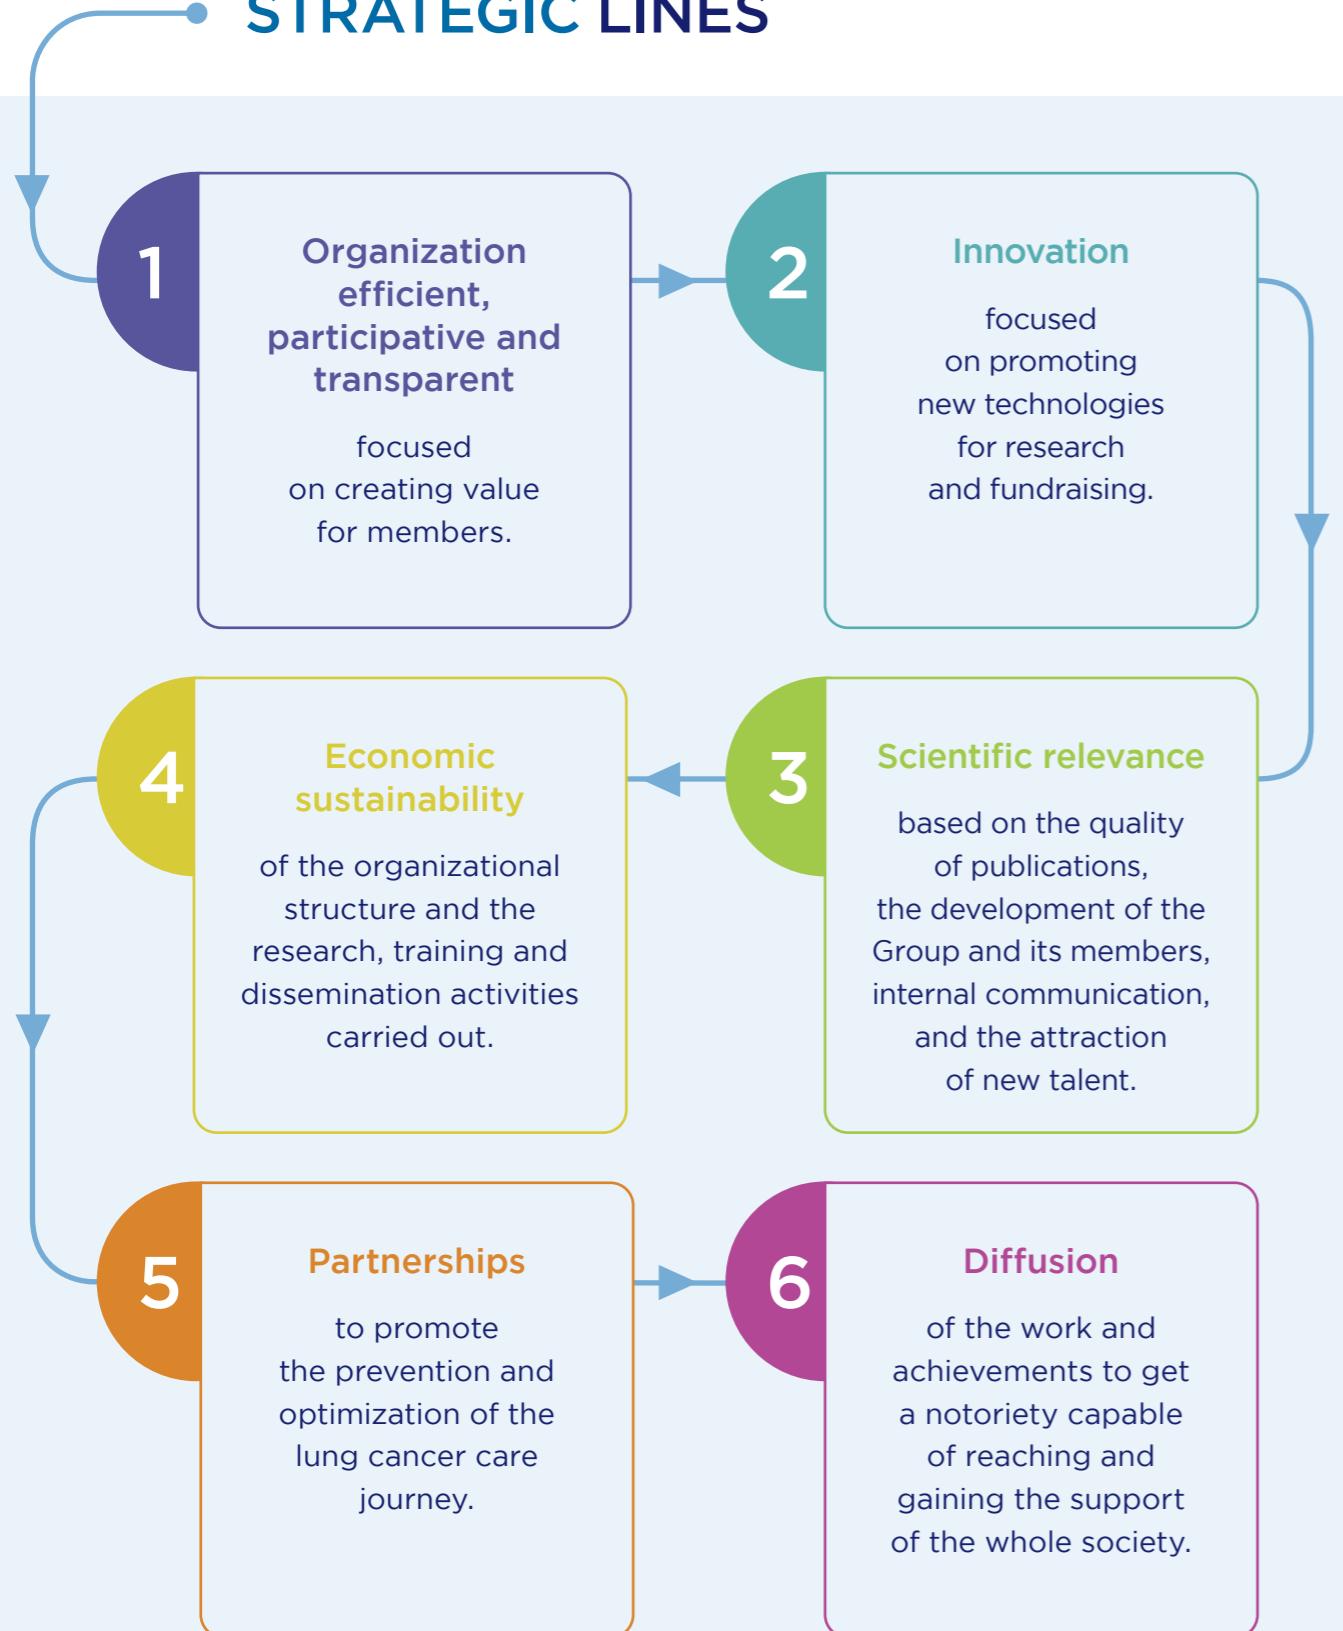

To promote translational research.

To prevent and raise awareness about the impact of lung cancer in the society and ways to prevent it.

The SLCG has a vocation for transparency. Its activity, supported thought private initiative, is open to society and to collaboration with other research groups and medical societies.

STRATEGIC LINES

WHAT WE DO

COMMITMENT TO RESEARCH

The main goal of the SLCG is to make progress in increasing lung cancer patient survival by establishing new lines of research to achieve more effective treatments and provide early access to new therapies.

The commitment to independent, translational and cooperative research is a key factor in the fight against lung cancer.

CONTINUED EDUCATION

The SLCG contributes to updating knowledge about lung cancer by organizing and participating in scientific training activities and events for current and future specialists and researchers in the field of lung cancer. It also provides support to young talent with the granting of scholarships to new research projects.

SOCIAL PARTICIPATION

As experts in lung cancer, the SLCG is committed to raising social awareness of the disease, so it participates in the conduct of testing and mapping for lung cancer in Spain, detecting new alerts and trends and demanding that the authorities adopt the necessary measures to deal with its incidence and mortality. It also fights for the primary prevention of the disease, supporting social awareness against the consumption of tobacco.

2 » Key facts at a glance

KEY FACTS AT A GLANCE

The SLCG is the result of a previous trajectory of collaboration among institutions and specialists and contributes to the promotion of network scientific research activities. Currently, the SLCG is a consolidated group with a large number of specialists and hospitals which are located around the entire national territory. Also, the high volume of scientific activity in research in recent years has led to an exponential growth of the staff.

Currently, the SLCG is positioned as one of the major national and international references in the field of lung cancer.

KEY FACTS AT A GLANCE

The cooperative groups are a stable independent cancer research network that began in Spain more than three decades ago. They are non-profit organizations, multidisciplinary comprising medical oncologists and other cancer specialists. The work of the Cooperative Groups is crucial to increasing the cure and survival rates of cancer patients. Some SLCG

trials have been decisive in changes in patient care practice and the use of new treatments. The SLCG is currently one of the most active working groups in lung cancer. The Spanish Lung Cancer Group is committed to transparency and its activities are open to society and collaboration with other research groups and medical societies.

3 » Structure and organization

The group is organized through three types of structures: governance, scientific and supporting structures.

STRUCTURE AND ORGANIZATION

GOVERNANCE STRUCTURES

GENERAL ASSEMBLY

The General Assembly, composed of all the associated members, is the supreme governing body of the SLCG.

BOARD OF DIRECTORS

The Board of Directors is responsible for the management and representation of the SLCG, for setting the scientific policy and for ensuring the appropriate scientific interest of the proposals for research studies promoted by the SLCG.

ADVISORY BODIES

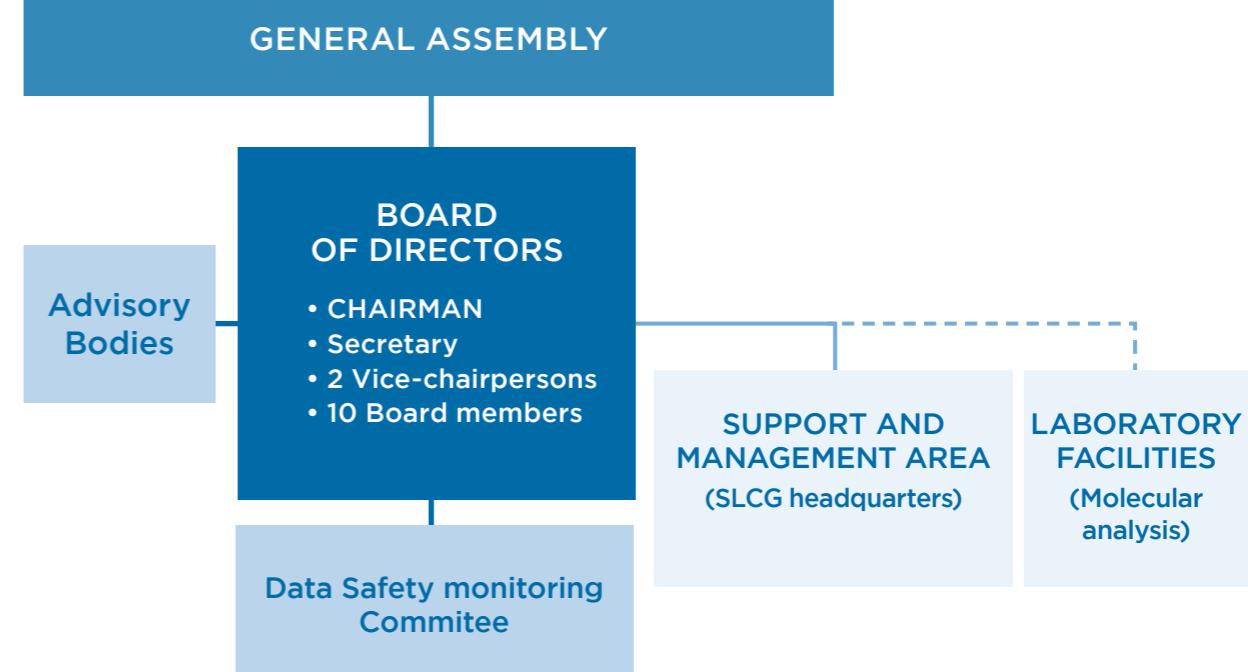

The Advisory Bodies give their independent and external opinion

on those issues that have been submitted by the SLCG (in accordance with the ethical and transparency commitment assumed) to facilitate and objectify the decision-making by the Board of Directors.

SCIENTIFIC STRUCTURES

DATA SAFETY MONITORING COMMITTEE

The body responsible for reviewing and assessing, based on the available data, a clinical trial progress in terms of safety, efficacy and scientific validity.

SUPPORTING STRUCTURES

SLCG HEADQUARTERS

The SLCG headquarters manages and supports the different research, training and communication activities carried out within the Group.

With over 20 years of experience, high know-how and a solid work and management team, the SLCG has achieved a significant positioning among the scientific and medical community in the development and coordination of lung cancer research. It emphasizes the direct and close relationship between the SLCG headquarters teams and the principal investigators, and their

work teams, due to the support that the SLCG team provides to the hospital study coordinator teams in the development of the studies promoted or managed by the SLCG.

Apart from national projects promoted by the SLCG, the headquarters team also collaborates, manages and monitors international studies in which those hospitals belonging to the SLCG actively participate.

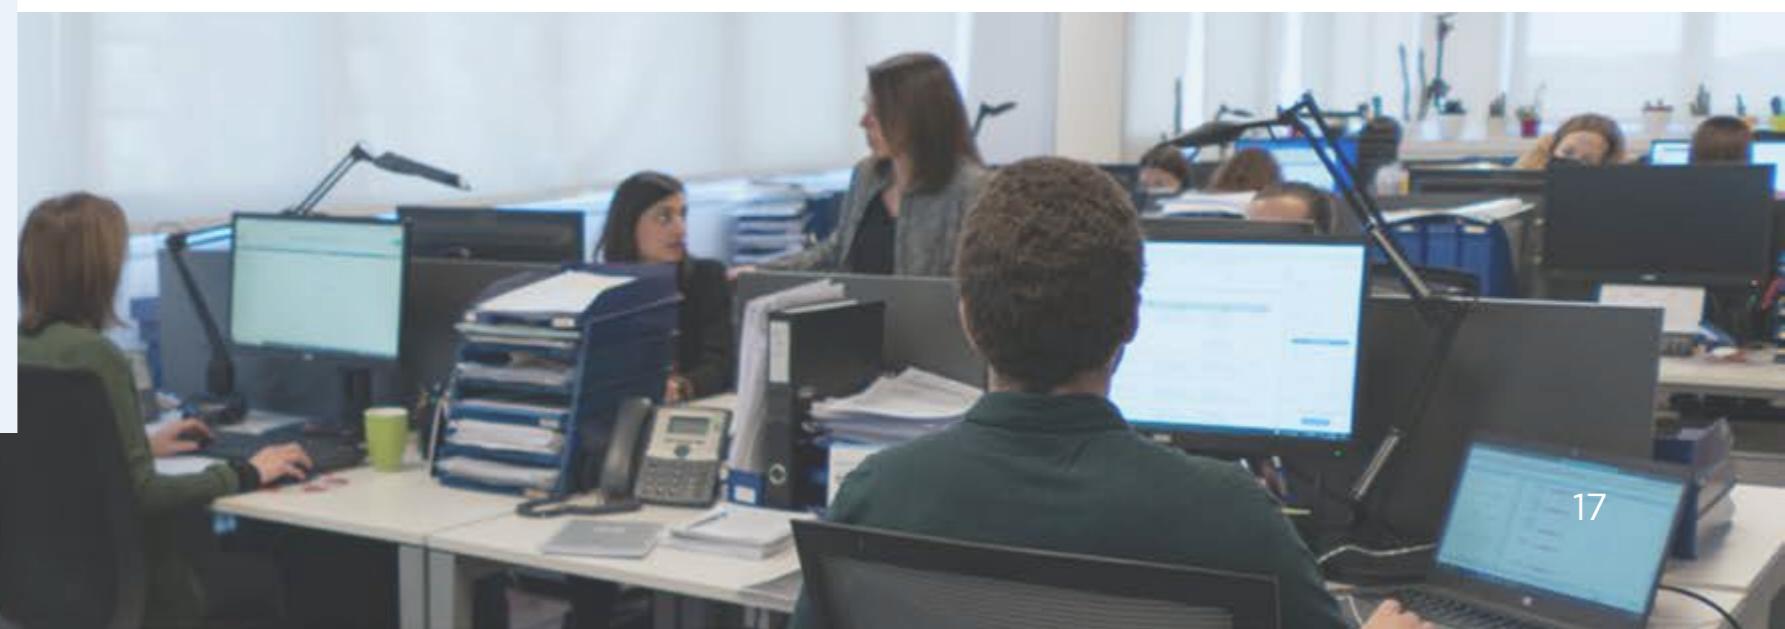

The team in SLCG's headquarters comprises people with large expertise in different activities related to these main areas:

 <h4>ADMINISTRATION-SECRETARY UNIT</h4> <ul style="list-style-type: none"> • SLCG's member management • File maintenance • Activity reports • Internal and institutional communication • Activities and events organization • Partnership and sponsorship management • Economic and financial management. 	 <h4>CLINICAL OPERATIONS UNIT</h4> <ul style="list-style-type: none"> • Project design, start up and management • Monitoring • Pharmacovigilance • Data management • Biostatistics • Quality and audit. 	 <h4>COMMUNICATION UNIT</h4> <ul style="list-style-type: none"> • External communication and public relations • Internal communication support • Corporate social responsibility.
---	--	---

The SLCG headquarters has a consolidated team, with extensive experience in managing research and a deep knowledge of lung cancer, that offers added value by providing comprehensive project management. Following

the international guidelines for good clinical practice, the team is responsible for managing the entire clinical trial cycle from the design and start-up, through the monitoring, to the close-out and publication of the results.

LABORATORY FACILITIES

The Group is committed to the individualization of treatments based on the genetic profile of each patient; thus, it focuses its research on the search for genetic alterations in the tumor and its response to different treatments. In parallel, it has developed an increasing number of basic research studies.

This means that all the clinical studies promoted by the SLCG have associated translational research that

is usually carried out at laboratory facilities. These laboratories are often part of institutes for health research associated with SLCG's member hospitals, and account for core units such as cell culture, cytometry, microscopy or molecular biology units where can be performed molecular analysis of patient samples (tumor tissue or liquid biopsy) collected in clinical trials and other analysis within basic research projects.

Specifically, the Puerta de Hierro-Segovia de Arana Health Research Institute (IDIPHISA) carries out a large part of the translational research of the SLCG's projects. The Liquid Biopsy Laboratory (LBL), from the Department of Medical Oncology of the Puerta de Hierro Hospital, provides diagnostic services and carries out research projects in the field of personalized medicine.

The LBL have been carried out translational research from some SLCG's clinical trials such as NADIM I and II, NADIM REAL, TELMA, APOLO, NEODIANA or ATLAS. Some of its main lines of research are:

Lines of research

- ▶ Clinical utility of circulating tumor DNA (ctDNA) for the management of lung cancer patients
- ▶ Study of the tumor microenvironment and the immune system-tumor relationship
- ▶ Determination of genetic profile in lung cancer
- ▶ Discovery of predictive and prognostic biomarkers in liquid biopsy.

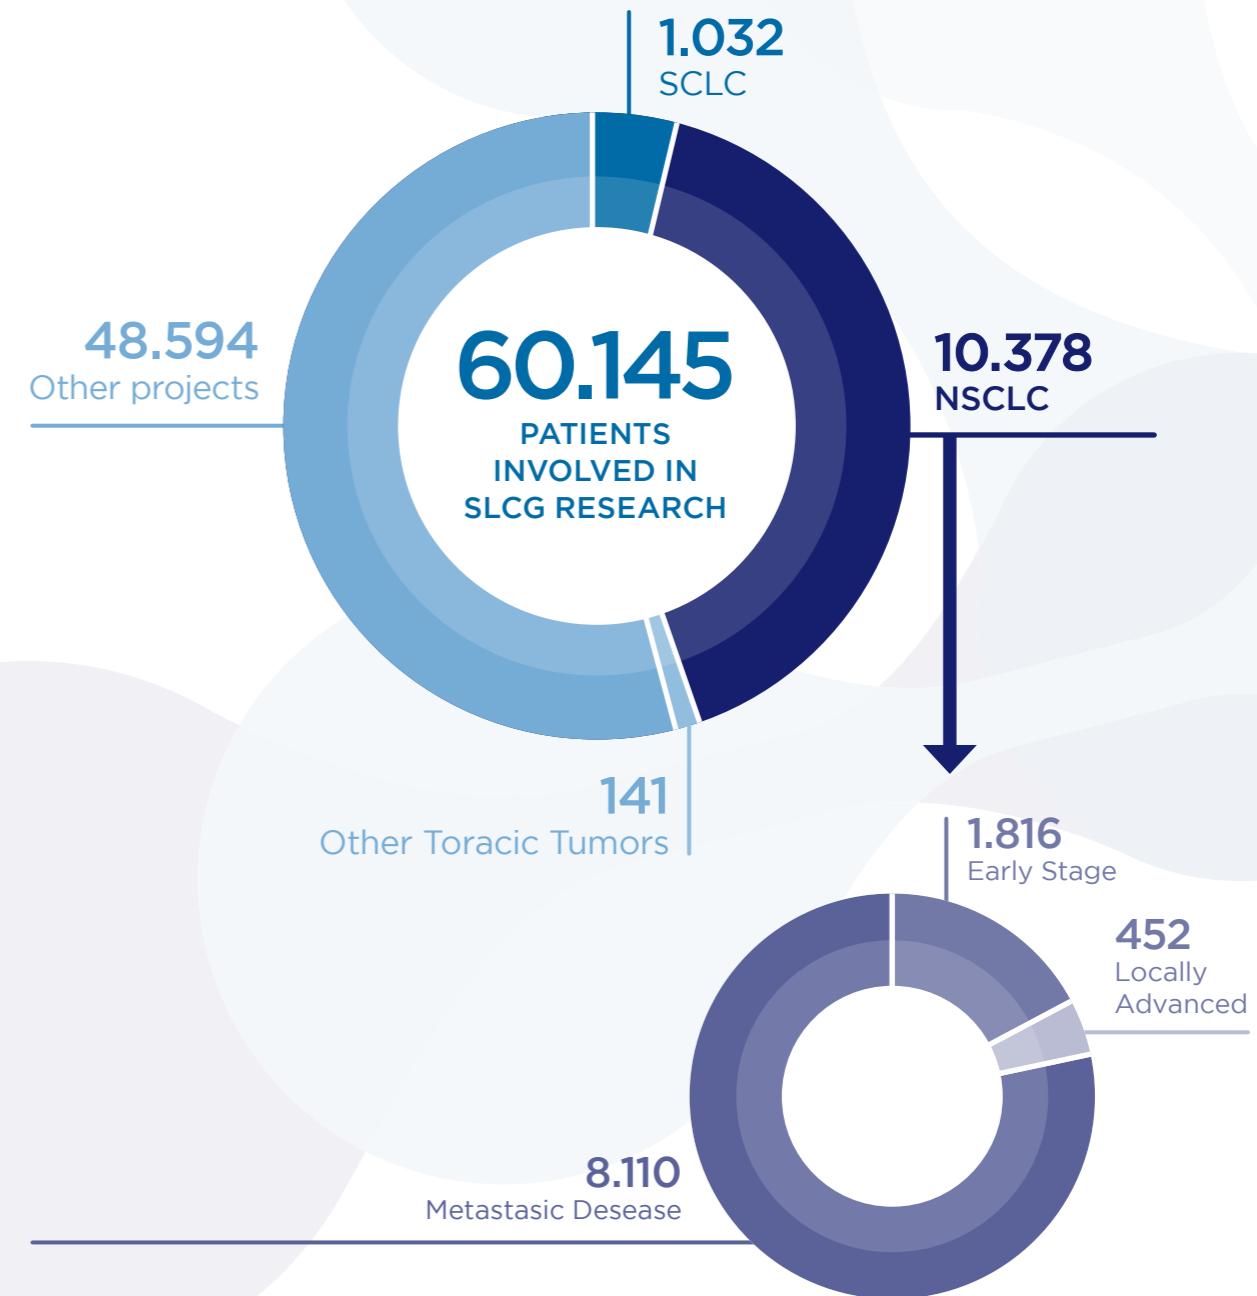

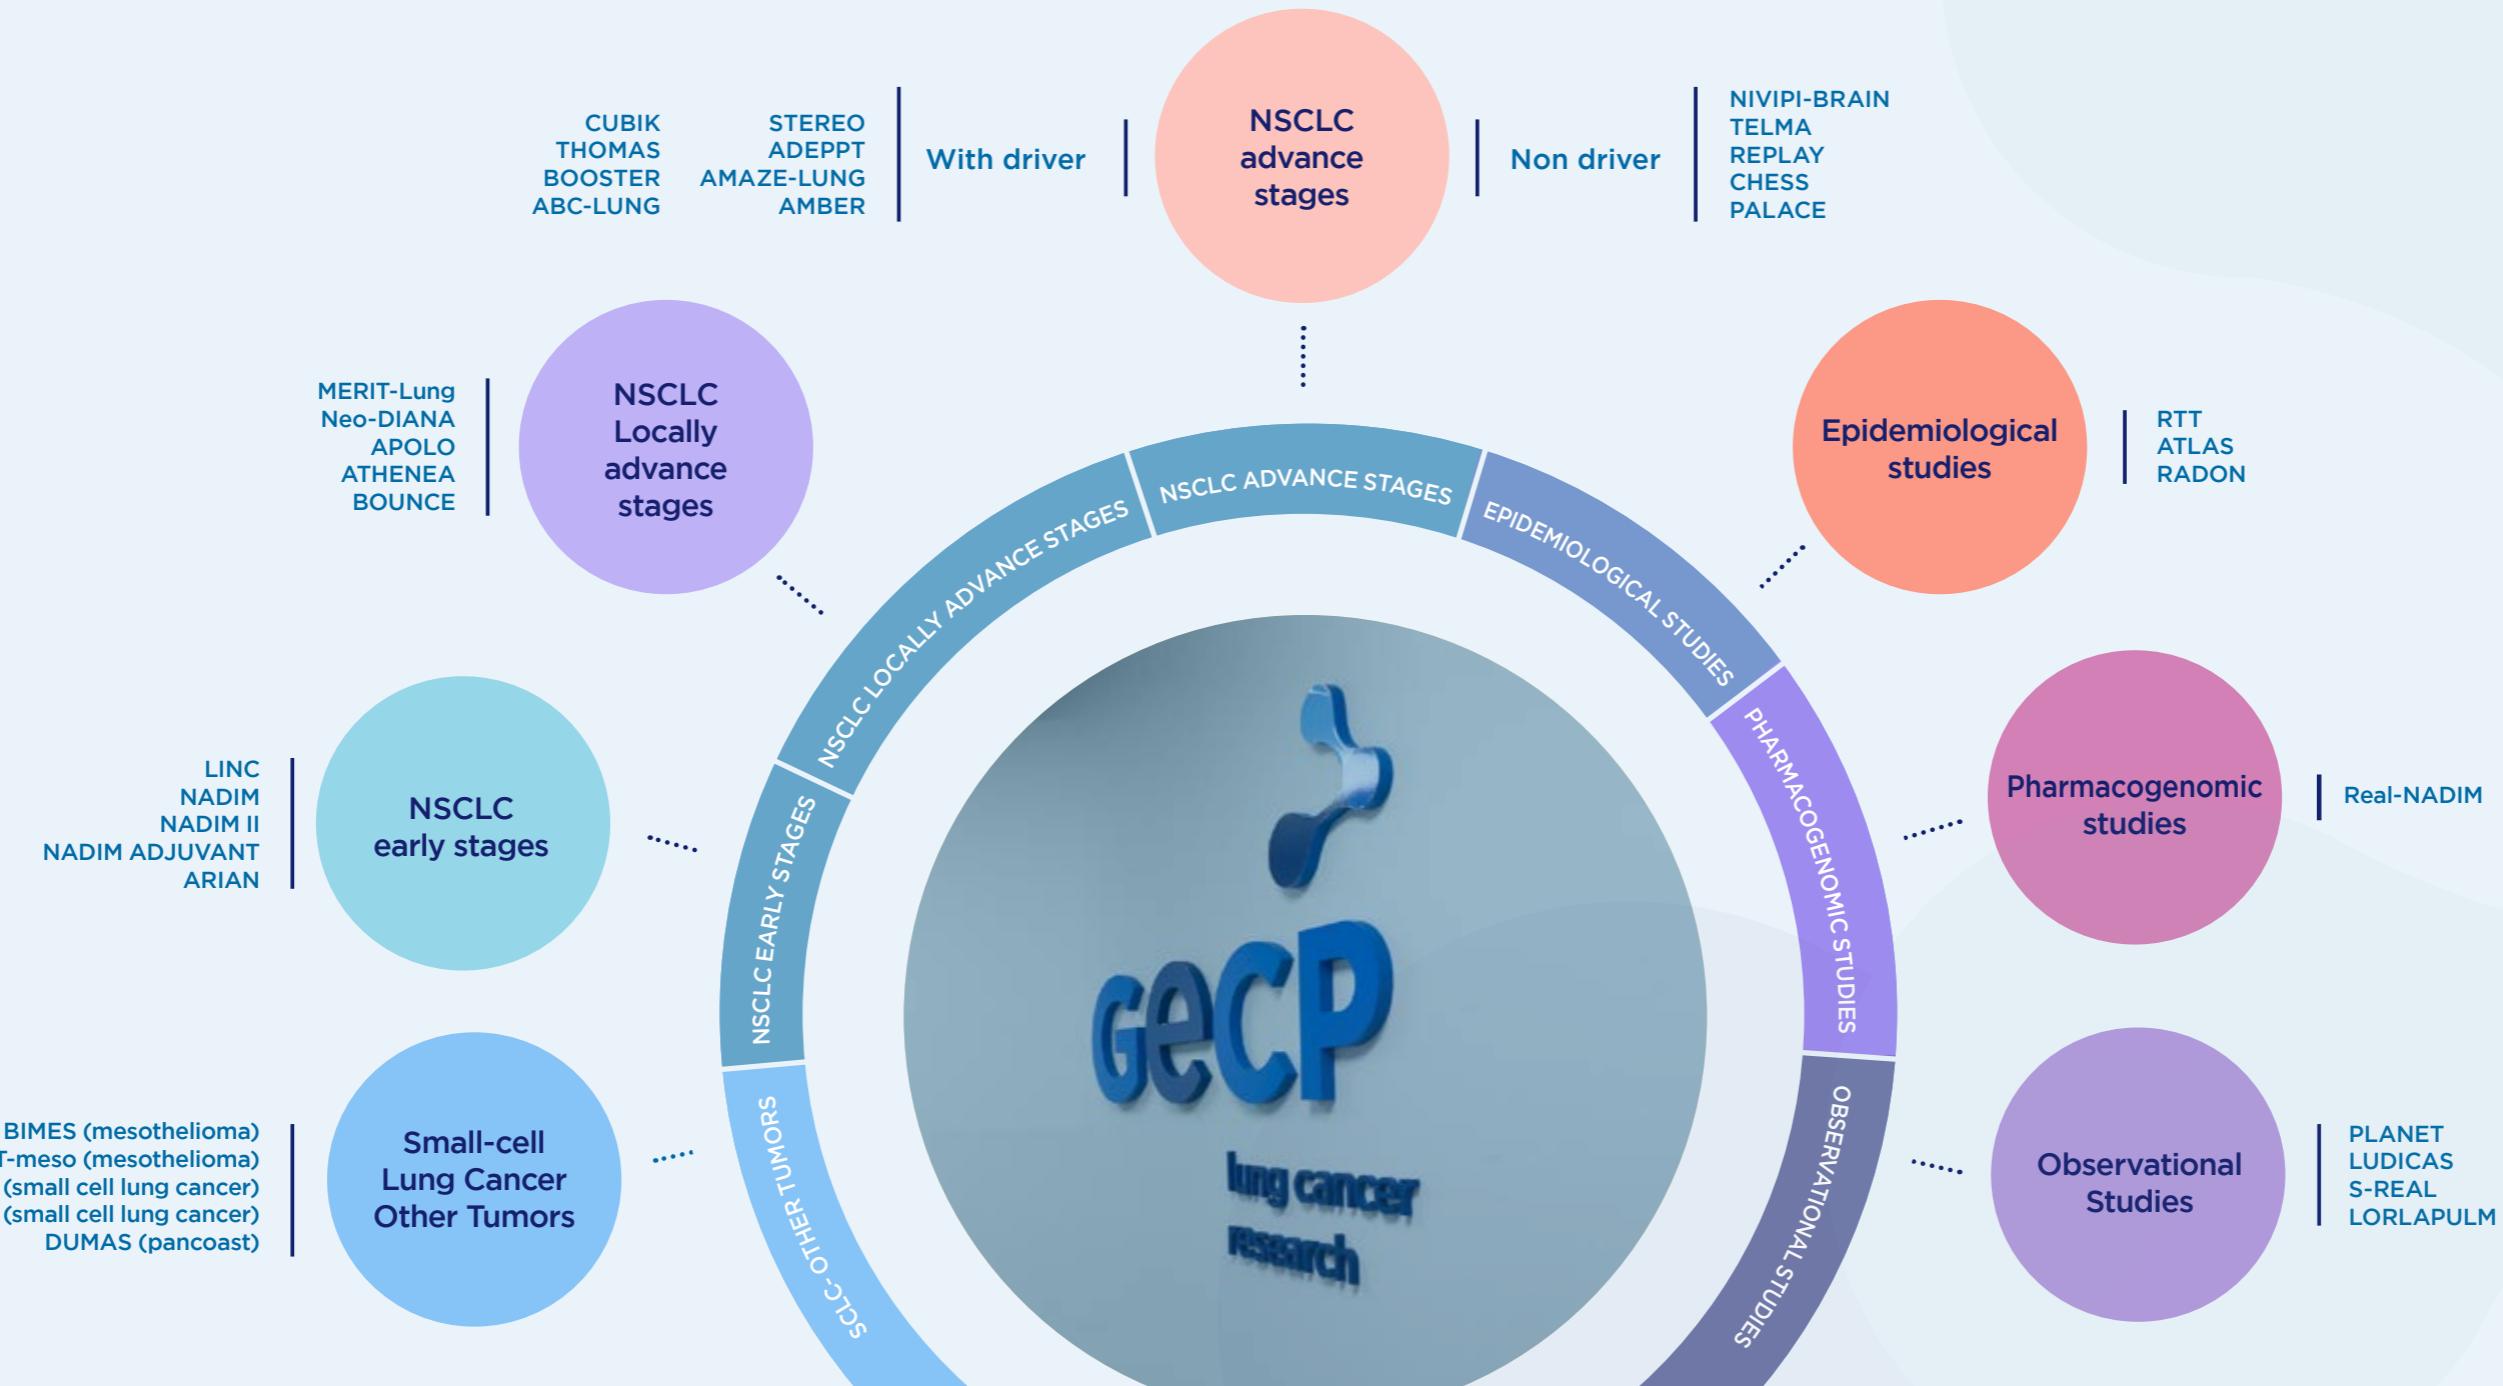

The LBL is provided with high technology equipment that allows the application of very innovative methodologies, such as: multiplex immunofluorescence, flow cytometry, cytokine arrays, TCR and BCR sequencing, single cell and spatial transcriptomic.

RESEARCH LINES AND CLINICAL TRIALS

Approximately, 90% of the studies carried out by SLCG are in-house developments, which highlights the group's high know-how in proposing ideas and being at the forefront of lung cancer research. Since its creation, the SLCG has conducted clinical trials and investigational projects, in different clinical situations and covering all aspects of the pathology.

SLCG RESEARCH**LUNG CANCER RESEARCH**

THORACIC TUMOR REGISTRY (RTT)

The SLCG marked a milestone in Spain by creating the first observational registry to know the descriptive epidemiology of thoracic tumors in Spain as well as clinical and histological data, diagnoses, treatments received and prognostic factors. RTT is an ongoing study (NCT02941458) that started the recruitment in August 2016 and is representative of the lung cancer reality in Spain.

Data are collected from patient's medical records by the participating centers in an electronic data capture (EDC) system and are classified into different sections: sociodemographic variables, epidemiological variables, clinical variables, molecular/genetic variables and treatment outcome variables. Given the quality and quantity of the data collected, the registry becomes a valuable source of knowledge of the situation of lung pathology, generating publications of high impact and international repercussion.

In addition, the SLCG has launched the ATLAS Project to study genetic markers in non-small cell lung cancer patients. The analyses are performed on tumor tissue using NGS from a central laboratory and the information is available in the EDC system of RTT. The participating centers will be able to use this information to help establish the best treatment for each lung cancer patient, favoring access and the universality of personalized medicine in Spain. With the ATLAS

Project, together with the RTT, the SLCG aims to create the National Observatory of Lung Cancer with the largest database of clinical and molecular characteristics of this disease in Spain. This database will provide relevant and comprehensive information for a better understanding of the dimensions of lung cancer at a scientific and social level.

SLCG STUDIES LAUNCHED SINCE 2014

SCIENTIFIC RESULTS AND EXCELLENCE

The impact of the SLCG publications in recent years has been high relevance, both in terms of quantity and quality, since many of the trial results have been published in leading international journals. This has positioned the SLCG at the forefront of relevance in lung cancer research worldwide and has been decisive in bringing about changes in the practice of patient care.

5 » International Alliances

INTERNATIONAL ALLIANCES

SLCG's activity transcends national borders and the Group is currently among the most active international working groups in lung cancer field. Its participation and organization of Symposia and International Congresses is also noteworthy.

REDICAP. Ibero-American cooperation

The SLCG, together with researchers from Argentina, Colombia, Peru and Portugal, has joined synergies to improve the outlook for lung cancer by creating REDICAP, Red Iberoamericana de Cancer de Pulmón. The SLCG currently holds the presidency of this association.

H2020 European Projects

The Group also participates in European projects within the framework of the Horizon 2020 programme, such as the **CLARIFY project**, which aims to facilitate the early discovery of risk factors that may deteriorate a long-term cancer survivors' condition after the end of the oncological treatment; and the **IASIS** project, which tries to advance precision medicine in lung cancer and Alzheimer's disease through Big Data management.

The SLCG actively collaborates with other working and research groups from around the world:

European Thoracic Oncology Platform, ETOP

Groupe Français de Pneumo-Cancérologie

Associazione Italiana Oncologia Toracica, AIOT

Manchester NHS Foundation

Belgium and Luxemburg groups

Chinese Group, parallel

CTIG. Serial biopsy project in EGFR mut+

ENCORE CLINICAL

Lung Cancer Group Cologne

Instituto Nacional de Cancerología, México

NVALT. The Netherlands

CCTG Canada

Lung Cancer Ambition Alliance

6 » Other SLCG activities

SCIENTIFIC AND CLINICAL TRAINING PROGRAMS

The promotion and encouragement of research and training are basic pillars for the SLCG. This, the Group organizes and carries out regularly different scientific meetings with a multidisciplinary vision that have been consolidated as meeting points between the different professionals involved in the management of lung cancer. The final goal is to

provide information and updates on the pathology accessible to young and experienced specialists through different formats: annual congress, educational symposium, competences courses, workshops, podcasts, streaming, webinars, etc. It also launches fellowship programmes for funding new research projects or for training and research.

CONGRESS, SYMPOSIA, HIGHLIGHTS INTERNATIONAL CONFERENCES, LUNG CANCER NEWS

- GECP Annual Meeting
- Lung Cancer Updates (platform Access Summaries for ESMO, ASCO; AACR, IASLC)
- Webinars GECP
- Podcast Lung Cancer

YOUNG RESEARCHERS SUPPORT

- Workshop 'Jóvenes Investigadores' GECP
- SLCG Grants (Research Project)

LEARNING AND UPDATES IN LUNG CANCER

- Curso de Competencias en Cáncer de Pulmón GECP
- Training and discussion programmes

COMMUNICATION AND DISSEMINATION

External communication has focused on informing society of advances in research, as well as increasing knowledge and social awareness of the disease. The SLCG disseminates high-impact newsletters in press, radio and television, keeps an updated and dynamic webpage and uses different social media (X, Facebook, LinkedIn and Instagram) to reach audiences of different profiles.

Disseminating the information among the associated members, the scientific community and other entities related to SLCG is essential to improve the pathology knowledge and to consolidate the relationships with the different SLCG audiences. The SLCG newsletter is the most relevant tool in this setting to inform about the Group activities and to give visibility and engage the associates with the organization.

OTHER SLCG ACTIVITIES

SOCIAL COMMITMENT

Thanks to their expertise in lung cancer, the SLCG is focused on creating social awareness of this disease. Some of their lines of work include:

Reference for social media in Lung Cancer

Mass media dissemination about the SLCG studies and activities.

Reports and Alerts about the situation of the pathology in terms of treatment, investment and research

Social Awareness in Lung Cancer

Awareness campaigns allow to inform society about the challenges and needs of lung cancer pathology and give patients a voice

Campaigns against tobacco

Information and awareness campaigns against tobacco for risk group. Scholar prizes for teenager students from 12 to 16 years in innovative format (spots, singles, raps, tiktoks)

Public Lobby

Contact and coordination with Public Health Administrations, entities and associations of interest related to lung cancer

Support to patient associations

Collaboration with Asociación Española contra el Cáncer (AECC), Grupo Español de Pacientes Con Cáncer (GEPAC), Asociación Española de Afectados de Cáncer de Pulmón (AEACaP), Ricky Rubio Foundation, Fundación Más que Ideas

» Annex I.

Clinical trials from 2015

EARLY STAGES

LINC (BR.31)	A Phase III Prospective Double Blind Placebo Controlled Randomized Study of Adjuvant MEDI4736 In Completely Resected Non-Small Cell Lung Cancer. NCT02273375
NADIM (GECP 16/03)	Neo-Adjuvant Immunotherapy With Nivolumab for Non Small Cell Lung Cancer Patients. NCT03081689
NADIM II (GECP 18/02)	A Randomized Phase II Study of Neo-adjuvant Chemo/Immunotherapy Versus Chemotherapy Alone for the Treatment of Locally Advanced and Potentially Resectable Non-small Cell Lung Cancer (NSCLC) Patients. NCT03838159
NADIM ADJUVANT (GECP 20/05)	A Phase III Clinical Trial of Adjuvant Chemotherapy vs Chemoimmunotherapy for Stage IB-IIIA Completely Resected Non-small Cell Lung Cancer (NSCLC) Patients. NCT04564157

LOCALLY ADVANCED STAGES

NORA (GECP 15/02)	Phase II Clinical Trial With Metronomic Oral Vinorelbine and Tri-weekly Cisplatin as Induction Therapy and Subsequent Concomitantly With Radiotherapy (RT) in Patients With Lung Cancer (NSCLC) Locally Advanced Unresectable. NCT02709720
Neo-DIANA (GECP 20/01)	A Phase II Trial of Neoadjuvant Treatment Carboplatin-Pemetrexed-Bevacizumab Plus Atezolizumab for the Treatment of Locally Advanced and Potentially Resectable NSCLC Patients With EGFR Mutations. NCT04512430
APOLO (GECP 20/08)	Phase II Clinical Trial of AMG510 (Sotorasib) in Stage III Unresectable NSCLC KRAS p.G12C Patients and Medically Ineligible for Concurrent Chemo-radiotherapy. NCT05398094
MERIT-lung (GECP 20/10)	A Phase III Prospective Double Blind Placebo Controlled Randomized Study of Adjuvant MEDI4736 In Completely Resected Non-Small Cell Lung Cancer. NCT02273375
BOUNCE (ETOP 21-21)	A Multicentre, Randomised, Phase II Trial of Brigatinib Consolidation Versus Observation or Durvalumab in Patients With Unresectable Stage III NSCLC and ALK-rearrangement, After Definitive Chemo-radiotherapy. NCT05718297

ANNEX I. CLINICAL TRIALS FROM 2015

ADVANCED STAGES. WITH DRIVER

CUBIK (GECP 19/01)	Clinical Utility of Liquid Biopsy as a Tool to Assess the Evolution of Brigatinib Treated Patients With Non-small Cell Lung Cancer With EML4-ALK Translocation: an Exploratory Study. NCT04223596
THOMAS (GECP 17/04)	An Open Label Phase II Study of Tipifarnib in Advanced Squamous Non-small Cell Lung Cancer With HRAS Mutations. NCT03496766
BOOSTER (ETOP 10-16)	A Randomised Phase II Trial of Osimertinib and Bevacizumab Versus Osimertinib Alone as Second-line Treatment in Stage IIIb-IVb NSCLC With Confirmed EGFRm and T790M. NCT03133546
ABC-Lung (ETOP 15-19)	A Randomised Non-comparative Open Label Phase II Trial of Atezolizumab Plus Bevacizumab, With Carboplatin-paclitaxel or Pemetrexed, in EGFR-mutant Non-small Cell Lung Carcinoma With Acquired Resistance. NCT03133546
STEREO (ETOP 17-20)	A Multicentre Single-arm Phase II Trial Assessing the Safety and Efficacy of First-line Osimertinib and Locally Ablative Radiotherapy in Patients With Synchronous Oligo-metastatic EGFR-mutant Non-small Cell Lung Cancer. NCT04908956
AMAZE-lung (ETOP 18-21)	A Multicentre Single-arm Phase II Trial of Amivantamab, Lazertinib Plus Bevacizumab in Patients With EGFR-mutant Advanced NSCLC With Progression on Previous Third-generation EGFR-TKI. NCT05601973
ADEPPT (ETOP 22-22)	A Multicentre, Single-arm Phase II Trial of Adagrasib in Patients With KRASG12C-mutant NSCLC, Including the Elderly (≥ 70 Years) or Patients With Poor Performance Status. NCT05673187
PEBEL (GECP 16/06)	Survival, Quality of Life and Self-reported Outcomes of Elderly Patients With Advanced Non-small Cell Lung Cancer Treated With Pembrolizumab (MK-3475) in the First Line Setting. NCT03293680
NVALT (NVALT-15)	Phase II study with BIBF1120, an oral fibroblast growth factor 1 inhibitor, as second-line treatment in patients with non-small cell lung cancer and fibroblast growth factor receptor 1 gene amplification (NVALT-15).
ALERT-Lung (ETOP 12-17)	A Single Arm Phase II Trial Evaluating the Activity of Alectinib for the Treatment of Pretreated RET-rearranged Advanced NSCLC. NCT03445000

ANNEX I. CLINICAL TRIALS FROM 2015

ADVANCED STAGES. WITHOUT DRIVERS		SMALL CELL LUNG CANCER (SCLC) STUDIES	
TELMA (GECP 18/03)	A Phase II Open Label Study of Atezolizumab in Combination With Bevacizumab as First Line Treatment for Locally Advanced or Metastatic High-intermediate Tumor Mutation Burden Selected Non-squamous Non-small Cell Lung Cancer Patients. NCT03836066	STIMULI (ETOP/IFCT 4-12)	A Randomised Open-label Phase II Trial of Consolidation With Nivolumab and Ipilimumab in Limited-stage SCLC After Chemo-radiotherapy. NCT02046733
ETOP-CHESS (ETOP 14-18)	A Multicentre Single Arm Phase II Trial Assessing the Efficacy of Immunotherapy, Chemotherapy and Stereotactic Radiotherapy to Metastases Followed by Definitive Surgery or Radiotherapy to the Primary Tumour, in Patients With Synchronous Oligo-metastatic Non-small Cell Lung Cancer. NCT03965468	PEERS (GECP 20/06)	A Phase II Study of Pembrolizumab, Lenvatinib and Chemotherapy Combination in First Line Extensive-stage Small Cell Lung Cancer (ES-SCLC). NCT05384015
NIVIPI BRAIN (GECP 21/02)	Nivolumab Plus Ipilimumab Plus Two Cycles of Platinum-based Chemotherapy as First Line Treatment for Stage IV/Recurrent Non-small Cell Lung Cancer (NSCLC) Patients With Synchronous Brain Metastases. NCT05012254	RAISE (ETOP 23-22)	A Single-arm Phase II Trial of the Addition of Niraparib to Anti-PD-L1 Antibody Maintenance in Patients With SLFN11-positive, Extensive-disease Small Cell Lung Cancer. NCT05718323
REPLAY (GECP 17/02)	A Phase II Open-label Multicenter Exploratory Study to Assess Efficacy of Pembrolizumab Re-challenge as Second or Further Line in Patients With Advanced Non - Small Cell Lung Cancer. NCT03526887	OTHER LUNG TUMORS STUDIES	
SPLENDOUR (ETOP-5-12)	A Randomised, Open-label Phase III Trial Evaluating the Addition of Denosumab to Standard First-line Anticancer Treatment in Advanced NSCLC. NCT02129699	BEAT-Meso (Mesothelioma) (ETOP 13-18)	A Multicentre Randomised Phase III Trial Comparing Atezolizumab Plus Bevacizumab and Standard Chemotherapy Versus Bevacizumab and Standard Chemotherapy as First-line Treatment for Advanced Malignant Pleural Mesothelioma. NCT03762018
PIPSeN (CSET2014/2204_ PIPSeN)	A Randomized Double-blind Phase II Trial Evaluating Maintenance Olaparib Versus Placebo in Patients With Platinum-sensitive Advanced Non-small Cell Lung Cancer. NCT02679963	PROMISE-Meso (Mesothelioma) (ETOP 9-15)	A Multicentre Randomised Phase III Trial Comparing Pembrolizumab Versus Standard Chemotherapy for Advanced Pre-treated Malignant Pleural Mesothelioma. NCT02991482
DURVAST (GECP 16/04)	Phase II clinical study of Durvalumab (MEDI4736) in HIV-1 (Human Immunodeficiency Virus-1) positive patients with advanced solid tumors. NCT03094286	BIMES (Mesothelioma) (GECP 20/09)	A Phase II Single Arm Clinical Trial Assessing the Efficacy and Safety of BIInrafusp Alfa (M7824) in Previously Treated Advanced Malignant Pleural MESothelioma (BIMES). NCT05005429
NIVEX (GECP 16/05)	A Retrospective, Multicenter and Observational Study of Nivolumab Monotherapy Treatment in Subjects With Advanced or Metastatic Squamous (Sq) or Non-Squamous (Non-Sq) Non-Small Cell Lung Cancer (NSCLC) Who Have Received at Least One Prior Systemic Regimens for the Treatment of Stage IIIb/IV NSCLC Within the Expanded Access Program (EAP) in SPAIN. NCT03132493	DUMAS (Pancoast) (GECP 22/02)	Phase II Clinical Trial of Neo-adjuvant Chemo/Immunotherapy Followed by Adjuvant Treatment Depending on the Resection Status for the Treatment of NSCLC Patients Diagnosed With Pancoast Tumor. A Multicenter Exploratory Study. NCT05684276
ATEZO- BRAIN (GECP 17/05)	Phase II Non-randomized Study of a Atezolizumab (MPDL3280A) in Combination With Carboplatin Plus Pemetrexed in Patients Who Are Chemotherapy-naïve and Have Stage IV Non-squamous Non-small Cell Lung Cancer Twith Asymptomatic Brain Metastasis. NCT03526900
